-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2655

In response to applicant's pre-amendment dated Jan 16, 2004. The following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 11-162003.

Independent claims 1 and 10 merely read on adding the I/V signals from the photo detection elements followed by attenuating the added signal. The limitation "attenuate" read on any element that alters the added signal such as an equalizer, differential amplifier, gain control...etc. The reference shows a signal processing unit for converting the signal from the photo detectors into voltages (I/V converters) fig 7, and a processing circuit 5 having elements 501, 502 and 504 in order to attenuate the summed signal from the added (RF signal) from the photo detection means.

Claim 9 is allowed.

None of the cited prior art discloses the use of a complementary circuit element 20 in order to output an inverse signal to the added voltage signal from the photo detectors by performing a level shift of the added voltage signal.
